Better Evaluations for Everyone: What's New in Updated WCAG-EM

Jeroen Hulscher, Hidde de Vries (Logius)

CSUN, 11 March 2026. Anaheim, United States

Slides: **hidde.blog/slides-csun**

I'm Hidde

- standards specialist at Logius (Dutch government)
- co-editor of WCAG and WCAG-EM
- not a lawyer, nothing in this presentation is legal advice

Comparing accessibility

Our context

Universal Declaration of Human Rights

Adopted in 1948 by United Nations General Assembly.

Enshrines **basic rights** and **fundamental freedoms** of all human beings

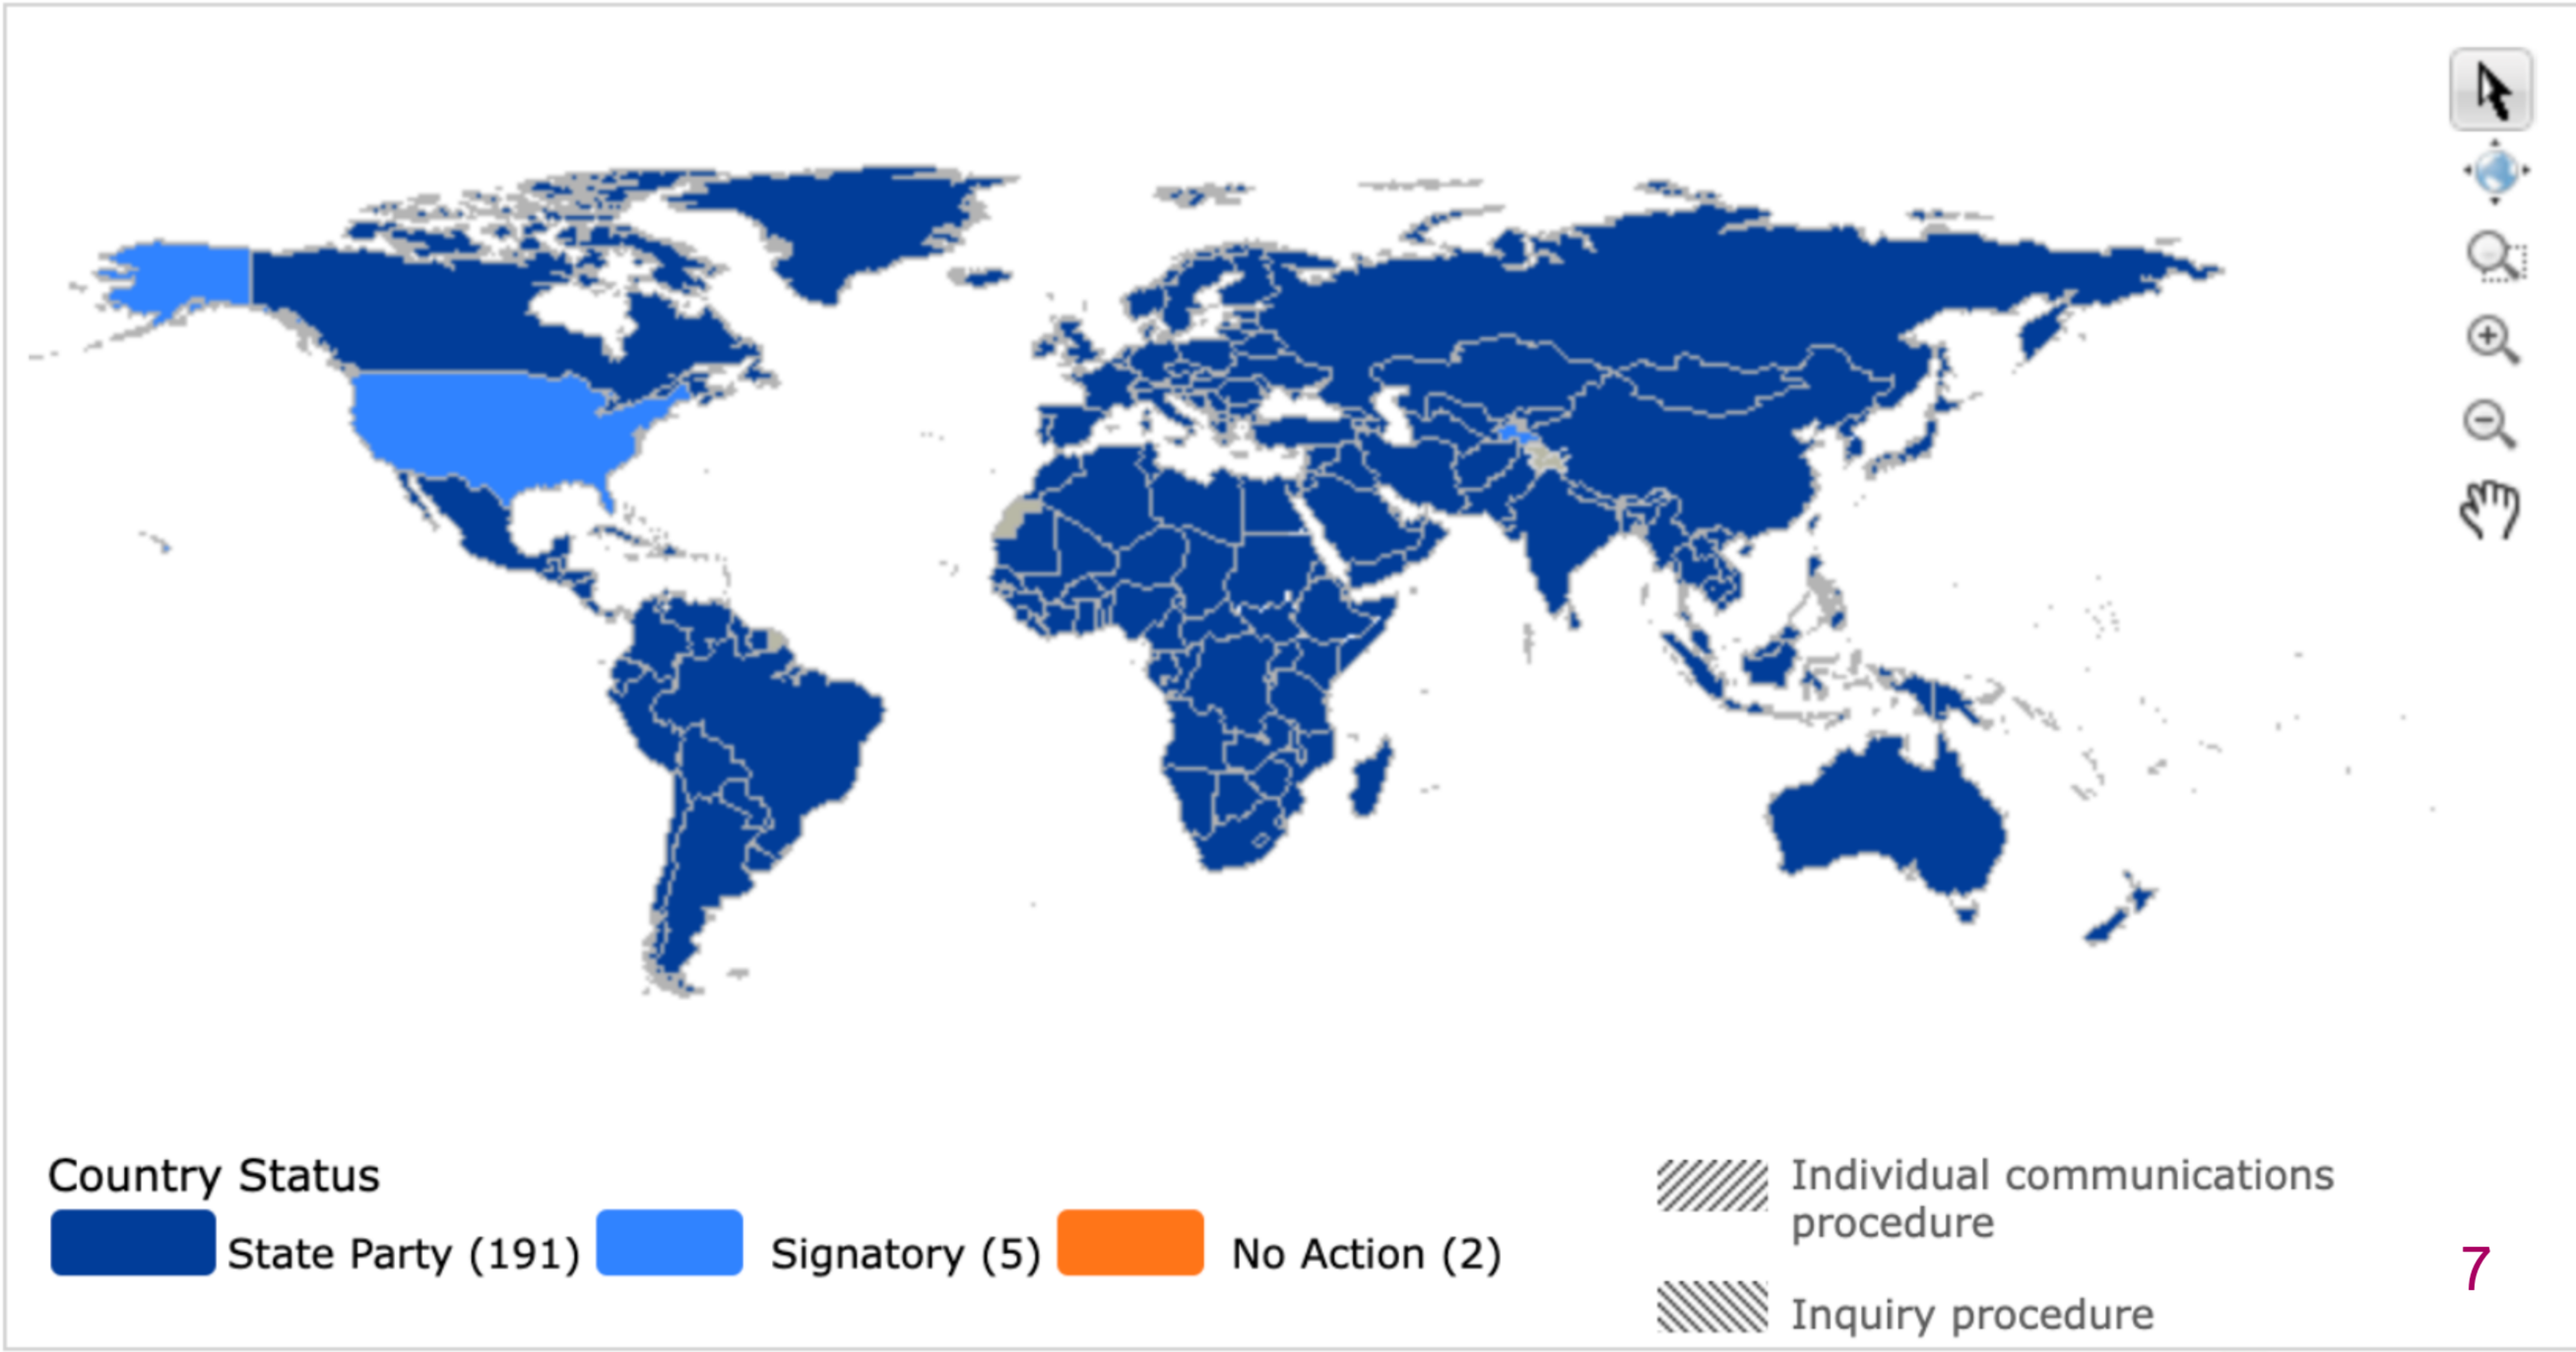
UN Convention on the Rights of Persons with Disabilities

2007: signed on behalf of the European Community

2011: entered into force in the European Union

legally binding, sets minimum standards

Convention on the Rights of Persons with Disabilities



European regulation to improve digital accessibility

Web Accessibility Directive (WAD), applies to public sector

European Accessibility Act (EAA), applies to private sector

Logius + accessibility

Our department prepares for regulatory oversight (in context of **WAD**), produces **tools** to help with it, contributes actively to **standards**, and brings together digital accessibility **expertise**.

~300 organisations*,
~9000 websites and apps

that we want to understand the accessibility of.

**cities, provinces, water boards, agencies, national government departments, etc*

If you're responsible for the accessibility of many websites, you need an evaluation method

What is WCAG-EM?

A brief intro

A standard to comply with regulation: EN 301 549

Points to WCAG for most requirements on websites (and more)

We want to understand how well websites/apps “meet WCAG”

(and yes, conformance is “web page”-based)

W3C Working Group Note

Abstract

This document provides guidance on evaluating how well websites conform to the Web Content Accessibility Guidelines (WCAG) 2.0. It describes a procedure to evaluate websites and includes considerations to guide evaluators and to promote good practice. It does not provide instructions for evaluating web content feature by feature, which is addressed by WCAG 2.0 success criteria. This document is one of a series of informative W3C/WAI resources about Evaluating Websites for Accessibility that complement the WCAG 2.0 Documents. It does not define additional WCAG 2.0 requirements nor does it replace or supersede them in any way.

The methodology described in this document is intended for people who are experienced in evaluating accessibility using WCAG 2.0 and its supporting

4.1.1 Step 1.1: Define the scope of the product
4.1.2 Step 1.2: Define the conformance target
4.1.3 Step 1.3: Define an accessibility support baseline
Step 1.4: Define additional evaluation

WCAG Evaluation Methodology (WCAG-EM) 2.0

W3C Group Note Draft 05 February 2026

▸ **More details about this document**

Copyright © 2022-2026 World Wide Web Consortium. W3C® liability, trademark and document use rules apply.

Abstract

This document describes a methodology with a step-by-step process to evaluate how well digital products conform to Web Content Accessibility Guidelines (WCAG) 2.

It provides technology-agnostic guidance to define the evaluation scope, explore the target product, select a representative sample set from products, evaluate the selected sample set, and report the evaluation findings. This procedure is suitable for use in different evaluation contexts, including self-assessment and third-party evaluation.

This document does not define feature-specific instructions, as the WCAG Success Criteria and supporting documents cover those. It also does not define additional WCAG 2 requirements, nor does it replace or supersede them in any way.

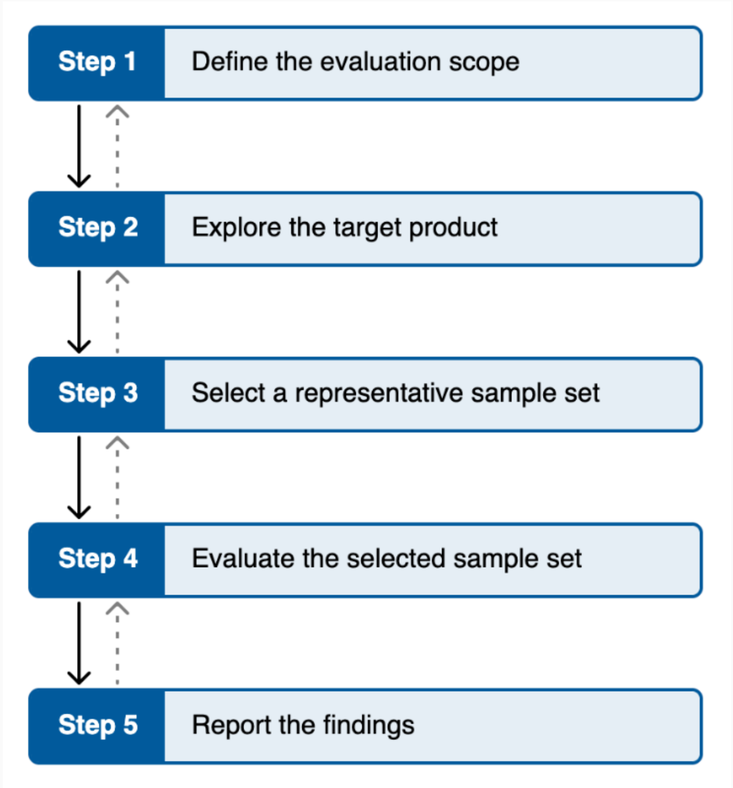
Status of This Document

This section describes the status of this document at the time of its publication. A list of current W3C

WCAG-EM

- procedure to evaluate websites
- guidance on scope, sample selection, reporting
- use on existing websites, or during development
- tech agnostic
- just a process, no new requirements (on top of WCAG)

WCAG-EM



Step 1
Define the evaluation scope
Step 2
Explore the target product
Step 3
Select a representative sample set
Step 4
Evaluate the selected sample set
Step 5
Report the findings

Step 1: define the evaluation scope

- the specific product you're talking about (Example: “All content on `csun.edu` ”)
- conformance target (Example: “WCAG 2.2 Level AA”)
- accessibility support baseline (Example: “Latest version of Firefox, Safari, Edge, JAWS, NVDA, VoiceOver”)
- other requirements (Example: “include any violations of 2.4.13 Focus Appearance AAA”, “write up all findings in Greek”)

Step 2: explore the target product

- identify common views
- identify essential functionality (eg “checking the schedule”, “purchasing tickets”)
- identify the variety of sample types (look for functionality, templates, settings, layouts)
- identify technology relied upon (eg HTML, CSS, JavaScript), also design systems, libraries
- find other relevant samples

Step 3: select a representative sample

Sample size depends on product size, age, complexity, consistency.

- include structured sample (incl common views, other relevant samples, essential functionality, types of samples, using tech identified)
- include random sample
- include complete processes

Step 4: evaluate the selected sample set

- check initial samples, use WCAG conformance model
- check complete processes
- compare structured with random sample set

Step 5: report the evaluation findings

- document outcomes, including:
  - meta data (evaluator, commissioner, date, version number, methodology etc)
  - scope
  - sample set
- document specifics, can include screenshots, reproduction steps
- (optional) provide a statement, score, machine-readable results

What WCAG-EM gives us

a way to report on the accessibility of a **whole website**

(especially if it's too big to look at everything)

Why WCAG-EM helps us monitor many websites at once

- consistency between reports
- comparability
- reproducibility
- indication of trust:

  a peak into what the evaluator did, how they got to the results

City of Rotterdam

(example of websites an org may be responsible for, illustration purposes only)

- their own site (rotterdam.nl)
- the rubbish pick up calendar
- the city's lost and found system
- the city archives
- Rotterdam Tourism Office
- the city council meeting notes
- the Eurovision temporary info hub
- Jobs @ City of Rotterdam
- The “Report Crime” app

WCAG-EM 2.0

Currently published as Draft Group Note, soon to be Group Note

WCAG-EM 2.0

Worked on in the Accessibility Guidelines Working Group (AGWG) for last ~7 months, editors Steve Faulkner (Tetralogical), Hidde de Vries (Logius), Jeroen Hulscher (Logius).

WCAG-EM 2.0

- editorial: spec tooling, spelling, language and URI fixes
- new name: WCAG Evaluation Methodology
- broader scope

WCAG-EM 2.0: broader scope

“web site” → “digital product”

Examples of digital products include websites, apps, kiosks...

WCAG-EM 2.0: broader scope

“sample” → “sample set”

1: Homepage

https://dashboard.digitoegankelijk.nl

2: Zoekresultaat

https://dashboard.digitoegankelijk.nl/zoek

Wie zoekt vanaf de zoekbox op de homepage komt op deze resultatenpagina, met de hop “Hoe DigiToegankelijk is…”. Dit is dezelfde pagina als 'lijst van alle organisaties'.

3: Organisatie (Zó digitoegankelijk is Logius)
